

X-Tack

EXTREME MOUNT WITHOUT SUPPORT

- Extreme initial strength
- Vibration and impact-resistant
- Can also be applied on wet substrate
- Perfect for vertical bondings

Technical Info

- · Basis: MS polymer.
- Specific weight: 1.49 g/cm³.
- . Viscosity: hard paste.
- Shore hardness (DIN 53505) after 3 weeks at • 23°C/50%.
- relative humidity: +/- 54 Shore A.
 Shrinkage (DIN 52451): approx. 5%.
- Density (DIN EN 27390): does not sag up to a 40 mm thick joint.
- Elongation at break: > 500%.
- Modulus at 100% elongation 23°C (DIN 53504 S2): 1.0 N/mm².
- Tensile strength (DIN 53504 S2): 2.2 N/mm².
- Skin formation: 3-5 minutes. .
- Hardening time: 24h 2.7mm

 - 48h 4mm.
- Temperature resistance: -40°C to +90°C.
- Processing temperature: from +5°C to +40°C.
- Chemical resistance:
 - · good: water, salt water, aliphatic solvents, oils, greases, diluted organic acids and lyes.
 - moderate: esters, ketones and aromatics. • poor: concentrated acids and chlorinated
 - solvents.
- Weather resistance: perfect.
- Shelf life: 12 months in closed, original packaging.
- . Safety measures: please read the safety data sheet.

Packing

X-Tack black - cartridge 290ml	534515000
X-Tack white - cartridge 290ml	534525000
X-Tack grey - cartridge 290ml	534535000

Product

Characteristics

- Already super-strong before curing: 600kg/m²
- Stable with adhesive thickness of up to 40 mm.
- Permanently elastic.
- Free of phthalates, solvents and isocyanates.
- Safe on mirrors, no markings on natural stone.
- Almost odourless.
- · Even on wet, slippery surfaces.
- Fungus and bacteria resistant. .
- Water and airtight.
- Can be used on most building materials.

Use

- Processing temperature from +5°C to +40°C.
- Apply to clean, dust and grease-free substrate.
- If necessary clean with Tec7 Cleaner or Multiclean.
- Apply with manual or air caulking gun (best with telescopic plunger).
- Test the adhesion to plastics, powder coatings, exotic woods and bituminous materials. Start by strengthening weak and/or porous substrates with Fixprimer.
- Alkyd resin will harden slowly.
- Use Tec7 Cleaner to clean and degrease safely, obtain the perfect finish, and to remove uncured Tec7 polymers. Use HP Clean to finish porous materials.
- When glueing mirrors in sanitary facilities only apply vertical strips of adhesive to avoid stagnant moisture due to condensation.
- Minimal thickness of the adhesive: 2 mm. Ideal adhesive thickness for optimal adhesion strength: 3 mm.
- The spout features a V groove to allow you to dose out the right thickness of adhesive. DO NOT CUT IT OFF.
- When applying, place the nozzle perpendicular to the surface.
- Use Tec Gun for easiest application.
- To achieve the strongest adhesion with the fastest curing time apply adhesive in strips (as opposed to glue dots).
